

“Amazing Serum 2” This is not just another soundbank. These sounds will completely change the operation of this synthesizer.

Each sound was created with the care of every detail using my own waveform. I was inspired by iconic 80s synthesizers such as Jup 8, DX7, Jun 6, Moog, and more.

I worked on this soundbank for 3 months discovering new sound design techniques in Serum. Some of these preset sound 95% like synthesizers from the 80s! I am almost sure that this soundbank is the maximum of the possibilities the serum offers.

Also as a bonus, you'll get all midis & samples heard in the demo in the special “construction kits” folder. So you can easily re-create all these songs. Plus you'll get over 100 bonus synthwave samples from my other sample packs.

Please note: All the sounds you hear in the demo come straight from the Serum. I only used basic tools to create the demo.

Pack Contents:

- 80 Serum presets
- 20 Midi Files
- 120 WAV Samples

Total Number Of Files:

- 220
- 215MB
- 100% Royalty-Free

Software Requirements:

- Serum v1.346 or higher
