Trance is an electronic dance music (EDM) genre that emerged in the early 1990s. Characterized by its hypnotic rhythms and repetitive beats, trance music typically ranges between 125 to 150 beats per minute. The genre is known for its use of synthesizers, steady 4/4 beats, and melodic, often ethereal, elements that create a sense of euphoria and emotional uplift. Trance tracks often feature build-ups and breakdowns that lead to powerful, energetic drops. Subgenres of trance include progressive trance, uplifting trance, and psytrance, each with its unique style and sound. Prominent artists have significantly shaped the genre. Trance music is a staple in global dance festivals and clubs, known for its ability to create a communal and immersive experience, drawing listeners into a state of musical transcendence.
