

SM101 breaks new ground with the freshest sounds for the hottest synth of 2014: Spire.

From brazen bass sounds to dirty bounce leads, adrenalin-spiking arps to crystalline plucks, soaring FX to punchy drum sounds, Future EDM Spire Patches delivers an essential serving of synth-spiration.

Drawing influence from the biggest artists around - Hardwell, Calvin Harris, Oliver Heldens - we've pushed Spire's original four oscillator engine and FX options to the max for a big, bold, detailed and truly unique collection designed to stand out from the crowd. All killer, no filler.

Many of the patches come routed intuitive mod-wheel parameter tweaking (filter cut-off, resonance, envelope) for even more sound control.

For added inspiration there's a bonus selection of MIDI loops from the demo included in the pack.
