

Experience a refreshing burst of energetic and amazing sounds with Elected Deep and Future from Big EDM. We hope to inspire an explosion of creativity as you discover the latest and greatest sounds to hit your DAW. Within this pack, you will find emulated real instrument sounds that include, guitar, piano, orchestral strings, and plucks. Punchy, throbbing, heart-thumping kick drums. Claps, hats, and snaps. Open and closed hats, crashes, and reversed cymbals. FX for uplifters, down lifters, impacts, and percussive fx. We've also thrown in our synth recipes by giving you our presets for Serum, Spire, Harmor, and Nexus. In addition to these audio samples and presets, you will also get 5 construction kits that consist of the latest and greatest electronically generated sounds for Deep and Future House.

What are Construction Kits?

These kits are similar to a remix pack. We are giving you 5 completed tracks that have the instrument and drum tracks separated. You can slice them, rearrange them, add in what you want and toss out what you don't. It's easy. Simply import the stems into your DAW. We've labeled everything so no need to have to figure out what the BPM is or what Key it is in.

If you want real audio samples that you can use in your tracks to submit to a label, shake the speakers at the club, or stream online, look no further. Pick up Elected Deep and Future from Big EDM.

Inspired by such artists as Axel Boman, Kerri Chandler, Kygo, CamelPhat and more.

Pack Contents:

- 5 Construction Kits (+ MIDI & Presets)
