### **Why MIDI And Not WAV?**

With MIDI you have the ultimate format where you can re-arrange notes, velocities, transpose, change MIDI lengths etc and assign your own VST Instrument or Hardware of your choice all this without any audio issues, to do this with audio wav file is virtually impossible or would take some messing about to achieve and with some specialist tools which cost a fortune and the results are not always the best with some audio material, having MIDI changing or keeping the same sound assigned and moving notes about is a breeze and takes no time at all and your audio always stays the same quality you set, also having 150 melodies at your disposal you could have the potential of 150 new track ideas surely these MIDI's will give you that creative edge you're looking for to your next hit.
