

The brand new Future Pop 4 from Audentity Records is the long-awaited and final successor to the previous Future Pop packs, which were really successful in the years 2017-2020 and were used by many big names in genres like K-Pop, Radio Pop, Hyper Pop, EDM and many others.

Specially for the large following of this popular series, we bring you a radio and festival-ready collection of the latest sounds in modern music, all housed in a megapack of almost 500 files.

We created the latest vocal chops, synth leads, chords & basses & plucks, drum loops and one-shots, synth, FX and vocal shots, usable for genres like K-Pop, Trap, Future Pop, Hyper Pop, EDM, Progressive House and lots more.

Also check out the great-sounding song starter loops and stack loops, which have been created by using the available content and processed even further to give you a great experience.

As always, all content is royalty-free, so once purchased you can use the loops and one-shots in your commercial releases across all platforms without paying us anything.
