

'Future Rave Sessions Vol 1' brings you a set of five Construction kits inspired by the trending sounds of David Guetta & Morten. This pack is filled with everything you need as a producer to start your own next Future Rave Productions. Essential Audio Media has also added two female vocal stems as a bonus to give you even more inspiration!

Every single Kit is split up into the following parts.

MIDI: Each Kit has its own MIDI folder to give you the freedom of changing any melodic part or use your own sounds from any of your favorite soft synthesizers.

One-Shots: This folder includes all the single drum one-shots that were used for each Kit and allows you to drag and drop your favorite drum samples into your sampler and create new rhythms.

Stems Dry & Wet: Essential Audio Media exported all the stems as 24-Bit WAV files so you can drag and drop them at once into your DAW and you'll have the full Kit. They also added a dry folder where the synths are without any effects so you can add your own reverb or delay settings.

Loops: All Stems are also available as 4-8 Bar loops exported as 24-Bit WAV to give you more freedom to make any stem file fitting into your project.

Presets: Inside this folder, you'll find the presets used in the Kits. Essential Audio Media have included presets for Serum, Spire and Sylenth1 VSTi's.
