'Modern Future Progressive Trance' by Elevated Trance is a brand-new series featuring an outstanding 20 x Modern Future Progressive Trance Construction Kits WAV, MIDI, and Presets.

Progressive trance emerged in the 1990s as a subgenre of trance music, characterized by its atmospheric soundscapes, deep basslines, and intricate melodies. Unlike its more energetic counterpart, uplifting trance, progressive trance often emphasizes a slower build-up and a more subtle climax, allowing for greater emotional depth. The tracks typically range between 128 and 132 BPM, merging elements from house and techno, resulting in a more groove-oriented sound. Pioneering artists like Sasha & Digweed and Paul van Dyk played pivotal roles in its evolution. Today, progressive trance maintains its distinct identity, blending ethereal atmospheres with innovative electronic beats, captivating listeners with its entrancing journey.

These kits will give you a great start to your next epic anthem or could be a great addition to your existing projects to give you that edge you've been looking for.

The kits contain three folders MIDI, Wav & Presets, the Wav folder contains all the stems needed to re-create what you hear in the demo for that kit, and the MIDI folder contains all the MIDI files for that kit to change notes or sounds when you are creating your new anthem and the Preset folder contains all the presets used with the MIDI files for each kit.

The presets in this pack are **FREE** they are used as a starting point for each kit but may contain duplications or similar sounds.
