

## Significant 80s Vol 4 - Spire Sound Pack

**Product info:** Proudly presenting the fourth release of the successful **Significant 80s** series for Spire.

This product is taking the levels of Spire sound capabilities to a higher territory, emphasizing on the realistic emulation of vintage analog & digital synthesis, the presets are faithfully emulated & inspired by real hardware synthesizers.

The **Significant 80s project** is all about Hauntology genre, as an experience of hypnotizing our senses by listening & enjoying a track from the past decades, but it doesn't belong to that timeline!

The overall feel of the sounds in this pack is bright-full, optimistic & nostalgic, which is the contrary to subgenres like **Cyberpunk**. This pack focuses on the **Retrofuturism** – a futuristic vibe of **Hypnagogic Pop [H-Pop]** music derived from a retrospective establishment – suitable for wider range of music genres, from **Electro-House** to **EDM & Riddim**.

The presets are ranging from basses to vibrant keys, Sci-Fi pads & top-notch synths, all presets are labeled, categorized\* and assigned to all Macros, capable to tweak the sound to reach a totally different sonic structure, and that indeed provides a complete, professional morphable preset library to fulfill the nowadays music production demands.

The **Full Pack** products comes with samples as well as 5 pro grade song kits, mastered by a truly dearest friend, the brilliant & super multi-talent **Maya Jovanovic** who also made the visual artworks.

Each song kit has its content (Midi, Audio stems, Presets) organized in convenient folder structure.
