

🔊 Ever bought a soundbank with flashy demos, but when you used it in your track... it just didn't work? Either the sounds didn't match, only 2 presets were usable, or worse — you had no idea how to make it sound like the demo.

✅ Synthrunners for Spire is different. The demo is recorded straight from the synth — no effects, no mastering no tricks. Every preset works together in harmony. They're strong, emotional, crowd-friendly, and engineered to help you build your next banger right out of the box.

🎹 Created by Amir Farhoodi and Mahdi Asadi, two seasoned producers with years in the A-class electronic music scene, Synthrunners gives you exactly what makes a track hit: strong melodies, monstrous and cute sound combos, and instant inspiration. You get shredding leads, deep basslines, lush pads — plus exclusive MIDI melodies and chord progressions and even a bonus FL Studio project to show you how everything fits together and how to work with each and every preset.

📁 Unlike other commercial packs that just look good in demos, this one is backed by real experience. Our team has released tracks on major EDM labels and worked behind the scenes as ghost producers for years. This isn't hype — it's the real deal.

💬 “This is the first time I added a preset pack and instantly used half of it in a real track. They just fit. No tweaking needed!”
— Test User (Trance Producer), France

📦 Don't waste time tweaking lifeless sounds. Download Synthrunners and build your next anthem with sounds that already hit!
