Tech House Worx delivers a refined collection of tech-influenced sounds, locking groove-driven foundations with carefully shaped musical details dripping with energy and attitude.

Each construction kit is set up as a flexible framework — solid, no messing about and ready to be twisted into whatever shape the session demands.

Across the pack you'll find driving bass loops with proper weight and bounce, tightly programmed drum loops, shuffling percussion and crisp top loops that sit sweet in the mix, leaving room where it counts and pressure where it's needed.

Vocal loops bring attitude and a bit of soul, adding bite and swing, while effects, risers and transitions let you dial in the energy exactly how you like it — from low-key tension to hands-in-the-air moments.

Stabs, synth and lead loops add character and hook-focused detail, keeping things stripped, punchy and just edgy enough to hold their own when the room's packed.

Included MIDI files crack open the core patterns behind the basslines and musical parts, letting you flip the harmony, swap out sounds or push the groove in new directions without losing its backbone — keeping everything tight, rolling and proper tech house from start to finish.

All sounds are supplied in both WAV and REX2 formats, keeping everything flexible, chop-ready and easy to slot into any workflow.

What's inside:

• 10 Construction Kits (MIDI files included)

All loops are in WAV, MIDI & Rex2 format, tempo & key-labelled.
