

Love Trap? Want something that has all the right elements of Trap but isn't the same thing as the other packs out there? From Big EDM comes Trap U. Of course, the fundamental elements are in this pack. But here is what else is inside. Let's start with the bass. 808. We all have them.

While many have sampled Roland's 808, and some have tried to enhance it, Big EDM has mastered it. Giving it a wider more broad area to occupy. Our bass rolls smooth and never distorts. We applied the perfect combination so that your 808 will sound great in the car, in the club, in headphones and anywhere in between.

Clarity you will hear and feel.

When you hear the hi-hats and snare rolls you will swear there is a real drummer playing beats just for you. True sequences and the right amount of transients and swing make it so you can groove easily with the beat, not sound robotic. We also have included droning tones that are easy to digest and add perfect ambiance.

Our multi-instrumental leads give you endless options to create something totally unique and not like anything out there. We have covered the foreground the background and everything in between that you need to make a Trap track that will captivate and engage. Our quality and clarity are top notch and broadcast, professional quality right out of the box.

If you want to step up your game and make a true professional track with the sickest sounds that haven't been used by every other label out there, pick up Trap U from Big EDM.
