

Voltage Controlled Odyssey Presets for Reveal Sound Spire

Voltage Controlled Odyssey is a sound library from Tenzu Wave featuring 68 presets for Reveal Sound Spire, all programmed by sound designer Andrew Flores.

The patches include phat basses, razor-sharp leads, haunting pads, glitchy transition and oneshot synth fx, organic plucks, polysynth/keys and percussion sounds. Though the sounds were designed with ambient, glitch/IDM, electro, industrial, cinematic, neurohop/neurofunk styles in mind, they are also suitable for dubstep, drum n bass, house, trance and other EDM genres.

The sounds feature plenty of the signature Tenzu Wave otherworldliness and include responsive organic instruments
