'What About: Infinity Trance' by W. A. Production has the hottest sounds to cover all types of Trance, hence the name. Emotional Trance, Uplifting Trance, Deep Trance, Progressive Trance, Ambient Trance, Chill Trance or Psytrance, this one for all the Trance lovers out there.

'Infinity Trance' contains six Construction Kits, perfect for producers who need to make a track fast, keep current on the latest sound design techniques, expand their knowledge of different genres, for beginners who are learning the ropes, or for those who just love to make Trance music and build their sound library.

Each Kit contains the FLP Project File so you can see every knob turn, setting, arrangement, Preset, and effect used. This includes the Presets for Serum and Sylenth1. Not to mention, the track is also broken down into stems in both wet and dry versions. This way you can choose to apply your own effects.

Beyond the Construction Kits if you want to build great tracks from the ground up there are over 130 additional one hits and loops. Everything from percussive loops, snare hits, kicks that explode, boom, or lay smooth in the sub-bass frequencies. You'll also get claps which are great when layered with the right snare, and a generous selection of cymbals that include open/closed hi-hats, rides, crashes and more.

Still, need more options? Aside from the Presets in the Kits, you'll find over 50 additional Presets for Serum and Sylenth1.

If you need a beautifully uplifting synth sound, piano, aggressive, drone, or arpeggiated loops, it's all here. Make the kind of Trance you want or explore a whole new world of hypnotic sounds, pick up 'Infinity Trance' from W. A. Production.
